

The code-file of the module is "rss.c". Use "make" to build rss.ko

The module can be inserted using the following command. Pid of the required process to be given as the command line argument "pid"

```
sudo insmod rss.ko pid=<pid> times=<times>
```

The understanding of in-kernel functionality as a high-level algorithm, and a methodology to demonstrate correctness, is shown in "Short_report.txt"

The experiments and results are given in the directory "Experiments_and_results".

Please read the "README" in that directory.
