

README

1 Loading the kernel device

1. cd to the patch directory
`cd patch`
2. run make
`make`
3. execute loadDevice.sh
`bash loadDevice.sh`

2 Checking the queue stats using procfs

```
cat /proc/my_char_device
```

3 Executing the user process for testing

1. cd to the user_process directory
`cd user_process`
2. run make
`make`
3. run the tester program
`./tester`

4 Unloading the kernel device

1. cd to the patch directory
`cd patch`
2. execute unloadDevice.sh
`bash unloadDevice.sh`
